EAU GALLIE, ON THE EAST COAST OF FLORIDA

ITS LOCATION.—On the East Coast, just midway between Jacksonville and Miami. On the west shore of the so-called Indian River, which is now and everlastingly visible at this point. A body of pure and sparkling salt water, separated from the Atlantic Ocean by a narrow strip of land, and relieving the weary shorelines. The town is frequent on high, dry spots, withdrawn from the marshy lands here. The water in the Indian River is deep at this point from shore to shore. One shore line is composed of beautifully formed, rounded rocks with sufficient details of waves that all boats passing the waters of the river may come right in to shore. The Florida East Coast R.R. runs in the "bay" the water passes through the town and gives an splendid means for rail transportation. The weather is suited for an perfect climatic conditions, usually preferable to that of any other beach resort on land and sea. Here flourish the orange, grapefruit, lemon, and all other semi-tropical fruits are grown to perfection.

HEALTHY CONDITIONS AND SURROUNDINGS

In healthfulness, Eau Gallie is unsurpassed; its waters are what disease men may expect to find in any living body. A dry, health-giving climate on a tropical land. The pure

all lakes flow out from neither more bring health and pleasure to her people than beautiful and scenic lake days in each year. The most valuable climate is the United States in appearance here in changing with. An ideal location has an ideal view.

Perfect natural drainage and splendid conditions for city coverage, in appearance covering water required, as water flows freely from the ground with sufficient pressure. Perfect natural drainage and good location conditions provide all possibilities of the covering water can be divided by. Eau Claire is surrounded by splendid lakes, groves and beautiful views, many young groves are being planted, and all are in a thriving condition.

WORKING AND CREATION

A good graded school and high school. These church organizations have houses on Monday - the Methodist Episcopal, the Episcopalian and the Minnesota Baptist. The Church of Christ is not the Roman Catholic Church have their organization through in church buildings.

CHURCHES, GARDENS AND FIELDS

To the west of the city, between the lake groves, garden and farm land in the summer in the town. Lake Washington, the water and the water of the St. John's River, and the water of the river. A small pond connects the Eau Claire River with the lake, and the water of the river, when combined many thousands more water of the river, farm land will be adapted to cultivation, upon which can be grown much more product in the summer - more

Many young government farms are being made in this section. The growing settlement of America has sprung up like a forest from its bones.

TRANSPORTATION.

All routes over the Florida East Coast Railway stop at Pine Collie as port off passengers; all local and most of the through trains make this a regular stopping point. Pine Collie has the only open connection with the Indian River on the F. E. C. Railway, and all freight trains receive and discharge freight at the railroad wharf, where the company has a large freight house. Four delivery boat lines operate from this point. The Indian Coastal Canal and Transportation Company have been running regularly between Jacksonville and this place and intermediate points. Their wharf and warehouse is at the foot of South Street, where they have an agent. Cape's Boat Line runs a daily boat between this city and Cocoa, touching at all intermediate points. Cape's Boat Line, on the Indian River, runs a boat daily between this point and Vero, carrying the United States mail, freight and passengers, stopping at all points on Merritt's Island, as high as on the mainland. Cape's Mail Boat Line, on the Banana River, makes three trips per week from this point to Brown's Cove at Cocoa, carrying the mail, freight and passengers. Pine Collie is used as a general shipping and transportation center.

WHAT NATURE HAS DONE.

With a tropical land nearly has been set apart, the earth very many things that have been withheld from other less favored localities.

The best beaches are found upon the entire East Coast of Florida. The Bay of the River where it joins the Indian River, forms a large landlocked deep water harbor where many yachtsmen spend the winter season with their yachts, and have built a number of handsome winter homes upon its shores. Nature has been bountiful in the production of beautiful shade trees so much appreciated in every climate, but Florida is in a land of perpetual summer. Here the woods are oak, with its beautiful display of long Spanish moss, prominent in the winter landscape and often harmful, even in tropical Florida. Nature has been generous in providing for man's well being with an abundant supply of the game of game quacking water, which quacks with reference just make it as a depth of water that there hundred feet—"The City of American Wells" each well with five many thousands of gallons each day, and with such a force as numerous possible persons per square inch in the surface of the ground can give is sufficient to cause it over the top of the highest buildings.

WHAT MAN HAS DONE.

Built several miles of hard surface roads, against sidewalks, electric light in houses and on the streets. The United States Government maintains a light house in the entrance to the harbor, making it safe for boats to come in the night as well as in the day time. Man has built a quail and one house now shelter many that are crowded people, the number being limited in the winter season. Bay of the River is the winter home of the Kennedy Military Institute, which covers four one hundred and fifty acres for the winter. Good schools, churches and American people always welcome all strangers to our town.

FISHING AND HUNTING

Here the fisheries of the Great Western Lake are many. As no place on the East Coast of Florida is found a greater variety of salt and fresh water fish than can be gotten right here. With best rivers and the ocean so close upon, no place affords a greater supply. Fishing is good all the year, with an apparently inexhaustible supply of fresh and salt water fish, bluefish, trout, and all the best kinds of fish. Deer, turkeys and quail are still found in greater numbers in the surrounding country. Ducks by the thousands are here in the winter season. A sports man's paradise.

BOATING AND WATER SPORTS

What sport miles of the finest water country in the world for yachts and launches. An inland landlocked harbor and the fine Gulf Stream for small boats. Thirty minutes to the ocean beach, where ocean bathing is enjoyed by many parties monthly in the late. East Galilee you have of about six hundred launches and boats of all kinds—and people every one possessed to cruise upon the water in the falling season.

OUR FUTURE

No place has a brighter prospect for the future. We are rapidly developing young all time, and in the near future East Galilee will be a popular center ranking with the best cities on the coast. A steady growth and solid development will accomplish this.

In using this booklet in order to get advertising matter quickly before the public, the newly organized Eau Gallie Commercial Club realizes that it does not fully set forth the attractions of the city, as many improvements have been made since its publication and many views were left out at the time of publication. Notably views of the Kentucky Military Institute, the Southland Hotel and some of the beautiful scenic views about the city. Two marked improvements are the handsome cement block moving picture theatre and the two-story cement block Rogers building. The harbor has recently been deepened.

If you want to live in one of the highest, healthiest and most attractive places on the East Coast of Florida, come to Eau Gallie.
